

LEVATOR VARIO

Automatic tandem tipper

MANOEUVRABILITY

FLEXIBILITY

LEVATOR VARIO

Automatic tandem tipper

Faun has built a reputation for optimising all the quality criteria and requirements that a buyer is looking for in a refuse collection vehicle. Faun quality encompasses innovation, cost, and environmental aspects (significant reduction of CO2 emissions and noise during collection, with better safety for refuse collectors).

Extremely rugged, for productivity gains

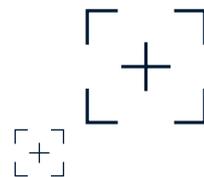

Productivity

LEVATOR VARIO is an independent automatic tandem tipper that is designed specially for collecting refuse in bins and bulk material. That means that firstly, its hopper offers large capacity, and secondly, it can compact without interfering with bin emptying, thereby maximising productivity. The hopper edge is designed so that no refuse falls to the ground.

Identification and weighing

A bolted rake makes it easy to install identification devices from all sources. The tippers are designed to offer a weighing facility, allowing the easy installation of commonly available weighing devices, making them suitable for the weight reduction incentive schemes of governments and local authorities. These devices can even be installed several years after the vehicle with a LEVATOR tipper was purchased.

Ergonomics and safety

Reduced overhang

- > New generation straight-line movement, short overhang, to optimise operator station ergonomics. Its intrinsic characteristics make it a very efficient household refuse collection vehicle
- > Because the vehicle is so compact, bins can be emptied without hindering the work of collectors, keeping them safer. This compact design combined with the limited weight of the tipper make it possible to install a household refuse collection vehicle on a chassis with a very short wheel base.

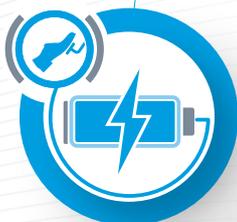

Maintenance free

- > Maintenance-free straight-line guiding and a drastic reduction in articulations make this a particularly low-maintenance tipper

CIN-ENERGIE

- > The optimisation of LEVATOR halves the energy required to empty a bin. With an engine power designed from the outset to receive a CIN-ENERGIE device, its addition offers the possibility of doubling the capacity and improving efficiency

Ergonomic collections with heightened safety

Pneumatic riser as standard

The pneumatically driven riser can be controlled automatically by the tipper position, making the collection of loose material very ergonomic.

Collector station

Particular attention has been paid to the ergonomics and safety of refuse collectors. The step plate and handrails are a perfect illustration of that, going well beyond the requirements of regulations.

Vehicle leasing, a winning option!

Now, more than ever, waste collection companies and local authorities are having to focus on controlling their finances. In order to allow market players to pursue a viable business policy, FAUN is progressively developing its concept: «Vehicle leasing - a winning option»!

The outsourcing arrangement proposed by FAUN allows companies and local authorities to make a detailed budget plan, thus increasing control over their investment (IFRS standard) and operating budget, without impacting their borrowing power.

Effective maintenance management and a high-tech vehicle fleet speeds up vehicle turnaround times.

FAUN provides its partners with a vehicle fleet ranging from 5 to 29 m³: Citadines for city centre waste collection, waste collection trucks for picking up household waste, industrial waste, organic waste and bulky waste, whether in trays or underground containers, together with road maintenance vehicles.
