URBANÉA

Ideal for collecting biowaste

Citadines are specially designed to collect municipal and household waste in city centres and historic centres. In their low hopper version, they are also used by city cleaning services to empty city waste bins (manual collection).

Their manoeuvrability gives Citadines the added advantage of speedier waste collection. Operating costs are further reduced by using an LCV, which is lower maintenance and cuts fuel costs.

The aluminium alloy design (shovel and truck) gives the vehicle the highest useful load on the market in its size category.

All the Citadines models can run in electric mode.

Economic gains and minimised disruption

URBANÉA, designed for hard-to-access areas in city centres

- › Functional and easy to handle thanks to a short wheel base with overhang < 2m
- › HGV driving licence, but on a vehicle with LCV dimensions
- › Collection possible in hard-to-access areas: narrow streets, pedestrian streets, no need to reverse, according to CNAMTS (French National Health Insurance Fund for Employees) recommendation R437
- › Higher useful load due to the use of aluminium alloy for both the shovel and truck (exclusive FAUN feature)

High-precision waste collection

- › Compaction provided by a truck-mounted, solid, curved shovel that pushes waste towards the front of the compaction chamber
- › Specific compaction for each layer, ensuring that the compaction chamber is filled to maximum capacity
- › Container lifting mechanism for all standardised containers of 80 to 1100 litres (4-wheels or two simultaneous 2-wheels)
- › 9 to 12-second container emptying cycle

Economic gains and energy performance

Designed to last

- > Availability of spare parts
- > All truck components are certified to CE standards
- > The URBANÉA waste collection truck is available in DUO version for combi-flow collections. Also available in an «organic waste collection» version that can collect up to 4 tons of organic waste in a 7.5 T GVW

Ergonomics

- > Electronic controller management coupled with a cabin-mounted interactive display provides for speedy remote solutions to 95% of breakdowns, thus avoiding having to call out a technician or have the vehicle collected or towed
- > Simple ordering system and speedy operations
- > Easy maintenance, all components are renowned for their reliability: Chapel brand actuators, Contrinex stainless steel sensor, class IP 69k (used in the food industry), Mafelec button box, dedicated hydraulic unit - therefore no stacking, hydraulic tubes guaranteed free of connector fittings...

Performance

- > Technical load capacity of 2 T (household refuse) on a chassis $\geq 5,5$ T GVW, with the advantage of being the size of an LCV
- > Chamber volume: 6 m³*
- > This equipment has a numbered CE certification, delivered by an accredited body by the French Labour and Employment Ministry, that guarantees incorporation of the European standard into French law
- > Compacting rate adjustable for the type of waste

* FAUN also offers a 7 m³ version on a 7.5 T GVW carrier

Vehicle leasing, a winning option!

Now, more than ever, waste collection companies and local authorities are having to focus on controlling their finances. In order to allow market players to pursue a viable business policy, FAUN is progressively developing its concept: «Vehicle leasing - a winning option»!

The outsourcing arrangement proposed by FAUN allows companies and local authorities to make a detailed budget plan, thus increasing control over their investment (IFRS standard) and operating budget, without impacting their borrowing power.

Effective maintenance management and a high-tech vehicle fleet speeds up vehicle turnaround times.

FAUN provides its partners with a vehicle fleet ranging from 5 to 29 m³: Citadines for city centre waste collection, waste collection trucks for picking up household waste, industrial waste, organic waste and bulky waste, whether in trays or underground containers, together with road maintenance vehicles.
